

Aegis for SAP

real time payment collections for SAP

SAP enhancement packs

Invenio enhancement packs are a range of pre-configured value added solutions that enable you to quickly automate and execute a range of processes within the finance function. These packs are only available from Invenio for the SAP platform. If required, they can be customised to your precise requirements in order to absolutely support the way that you do business.

In creating these enhancements, Invenio have drawn upon the experience and specialist knowledge of our entire team of SAP consultants. The result is the blueprint for a robust, stable and reliable configuration that adheres to SAP implementation best practice and is delivered using proven methodologies.

Real Time Payment Collections for SAP

If your company offers pre-paid or subscription services, you need to enable your customers to purchase these offerings anywhere, anytime, using the most convenient means of payment.

Today's consumers expect immediate processing of their payments so that they can receive immediate benefit from your services – for example, mobile phone services or to meet a payment deadline that allows them to avoid service disruptions or late payment penalties. Whatever the reason, the demand for faster payment processing is on the rise.

Aegis for SAP integrates into a pre-payment infrastructure and is configured to communicate with a variety of payment channels - thereby enabling you to dramatically improve the payment collection and pre-paid sales process.

With Aegis for SAP you can track your cash flow in real time, communicate more effectively with third parties acting as intermediaries for your payment collections and enable your customers to make fast and secure payments via channels that include banks and post offices, internet and payment kiosks.

With pre-paid services, it is particularly important that your customers can replenish pre-payment cards anywhere, anytime and in the amounts they require - and that their purchases become usable as soon as the transaction is complete. Invenio's solution makes this possible – thereby offering a way to improve customer retention and enabling the tracking of pre-paid payments in real time and from a single point. Aegis for SAP also offers:

Reduced collection costs

Payments are immediately received and processed in the billing system, allowing accounts payable, collection agents or customer service representatives to remove those customers from their call lists.

Aegis for SAP offers:

- high performance under heavy transaction loads
- scalability to meet future growth
- multi-currency support
- high security and data protection levels
- customisable user interfaces
- ease of use and extensive configuration options

Invenio is here to help you administer, support and develop your SAP solution so that you can get on with running your business efficiently and profitably. If you'd like to learn more about how we can help your business, please us on +44 (0)330 440 1800.

Improved customer satisfaction

Beyond giving customers more choices, real time payment processing brings the ability to give your customers instantaneous access to their purchased goods and services – for example, to get credit loaded to a gift card or minutes added to a phone.

Elimination of unnecessary costs

Prepaid service and subscription providers and gift card operators can move away from costly activation calls through collecting the relevant information and processing payments in real time.

Features

- High performance for heavy transaction loads.
- Scalability that meets the growing needs of the business.
- Rapid integration with SAP billing systems and payment channels.
- Ease-of-use and manageability through custom designed interfaces.
- In built adaptability to meet the needs of various network operators and service providers.
- Full multi-currency support.
- Flexible configuration for system security and access rights.
